## SUMMARY

Senior Data Scientist / AI Scientist with 6+ years building and shipping ML products that move core business metrics, including +1.5% retention, >20% feature usage lift, and >$500K incremental revenue. Delivered high-lift monetization and personalization systems, including upsell models driving 110+% lift in plan conversions and a real-time help-article recommender that increased CTR by 51%. Strong in translating ambiguous business problems into achievable ML solutions, measurable experiments, and production-ready implementations.

## EXPERIENCE

### Senior AI Scientist · Intuit Mailchimp
May 2022 – current; Atlanta, GA

- Built next best action model increasing key marketing metrics such as user retention by 1.5%, feature usage by >20%, **driving > $500k incremental revenue.**
- Designed and productionized upsell models which delivered **110+% lift in plan conversion rates.**
- Delivered production-ready code and deployed multiple versions of a real-time help article recommender system, **increasing CTR by 51%.**

### Senior Solutions Engineer · Datadog
May 2019 – July 2021; Paris, France

- Built and productionized part of the **Root Cause Analysis** product, automating critical data analysis workflows in collaboration with the Data Science team.
- Achieved top-10% performance in customer satisfaction by developing deep empathy for customer issues, leading C/VP-level troubleshooting and delivering tailored product demos, contributing to 15+ ~$100,000 ARR deals.
- Mentored new engineers, contributing to their career growth and promotions, and led 30+ troubleshooting calls.

### Machine Learning Consultant · Perfect Dashboard
February 2019 – April 2019; Warsaw, Poland

- **Improved performance** of a model for classifying WordPress websites condition after plugin updates (working/broken) **by 11%**, contributing to passing technical due diligence for a successful acquisition.
- Coordinated data annotation process, **improving** the labeling **accuracy** of a 10-person team **by 10%.**

### Co-founder · Researchably
January 2017 – January 2019; Southampton, United Kingdom / Berkeley, CA

- Participated in SkyDeck, UC Berkeley's startup incubator, with **$100,000 funding (< 2% acceptance rate).**
- Built a machine learning platform used by Sanofi **($20,000 deal**) for information extraction from research papers.
- Deployed and optimized an **active learning Support Vector Machine** model by using a secondary model for hyperparameter tuning, **improving search engine result accuracy by 52%**.
- Co-authored biomedical data annotation guidelines, **increasing annotation quality by 21%.**

## EDUCATION

### MS in Analytics/Data Science (Computational Data Analytics track)
Georgia Institute of Technology · Atlanta, GA · August 2021 – December 2022

### BSc Geography, Dean's List (3/3 years)
University of Southampton · Southampton, United Kingdom · September 2014 – June 2017

## SKILLS

**Languages, tools:** Python (incl. popular AI/ML libraries), SQL, Bash/zsh shell, Git, Docker, AWS/Azure/GCP, Datadog
**Techniques:** GenAI (prompt engineering, fine-tuning), data visualization, regression, variable/model selection, supervised/unsupervised learning, natural language processing, deep learning (TensorFlow, Keras, PyTorch), recommender systems, web scraping
